

RADIATION MEDICINE

The fundamental goal of the Department of Radiation Medicine is to provide optimal care to patients by means of ionizing radiation—much of it using proton therapy, the hospital-based application which was pioneered by the department. This care rests upon the foundation of basic, translational, and clinical research which, when combined with patient education, ensures that patients and their families receive state-of-the-art treatment planning and delivery, follow-up and posttreatment care, and support.

Chair

Jerry D. Slater

Vice chair, Clinical Affairs

David A. Bush

Primary faculty

David A. Bush
